01

WGW420 PLUS WIRELESS GATEWAY CONFIGURATION

step

01

WGW420 PLUS WIRELESS GATEWAY CONFIGURATION

TEKON CONFIGURATOR SOFTWARE is only compatible with the Microsoft® Windows® Operating System.

01

Connect the antenna to the *Gateway*.

02

Wiring

Connect the power supply and then the *RS485-USB* cable to the *Gateway*.

Wire Indication:
Blue - GND; Brown - +24 VDC; Orange - Data+ (A); Black - GND; Yellow - Data - (B)

03

Power ON the device.

step **01**
WG420 PLUS WIRELESS GATEWAY CONFIGURATION

04 Check device connection state by LED indication.

10 Seconds to enter configuration mode

Normal mode

1 → Green LEDs permanently on

2 → Red LEDs permanently on

05 Open *Tekon Configurator Software*

Tekon Configurator

tekon
WIRELESS SENSORS TECHNOLOGY

step

01

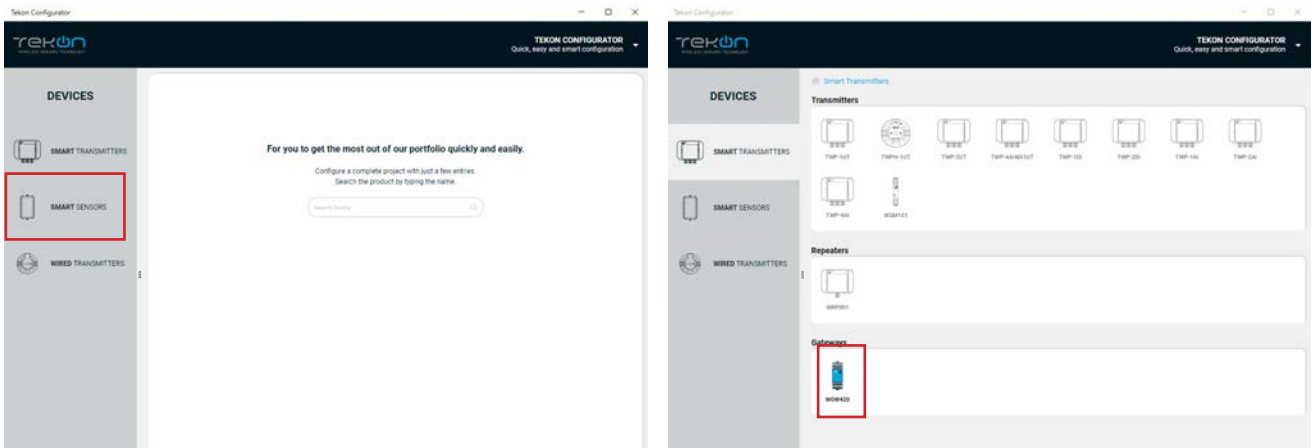

WGW420 PLUS WIRELESS GATEWAY CONFIGURATION

06

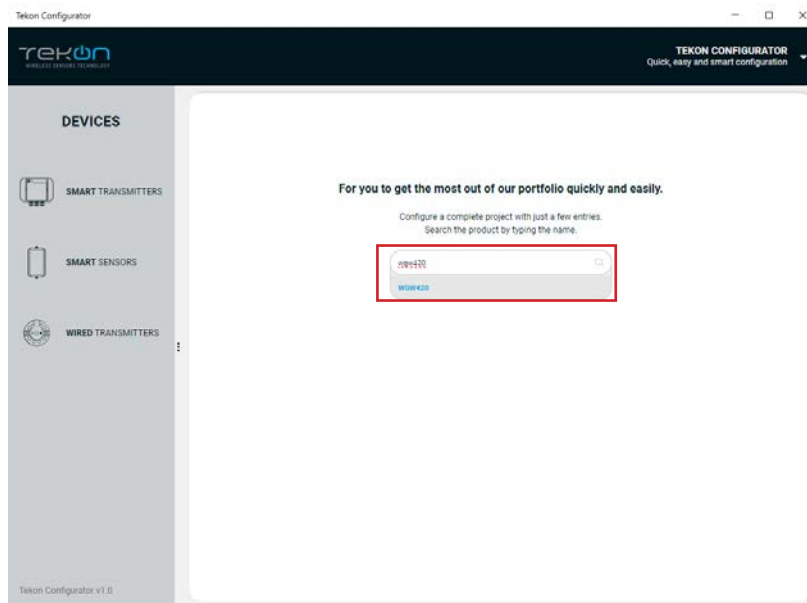

Open the WGW420 PLUS Wireless Gateway device page.

You can enter the device's page in the following ways:

1st option: Click on **"SMART TRANSMITTERS"** in the left menu and then click on the WGW420 device.

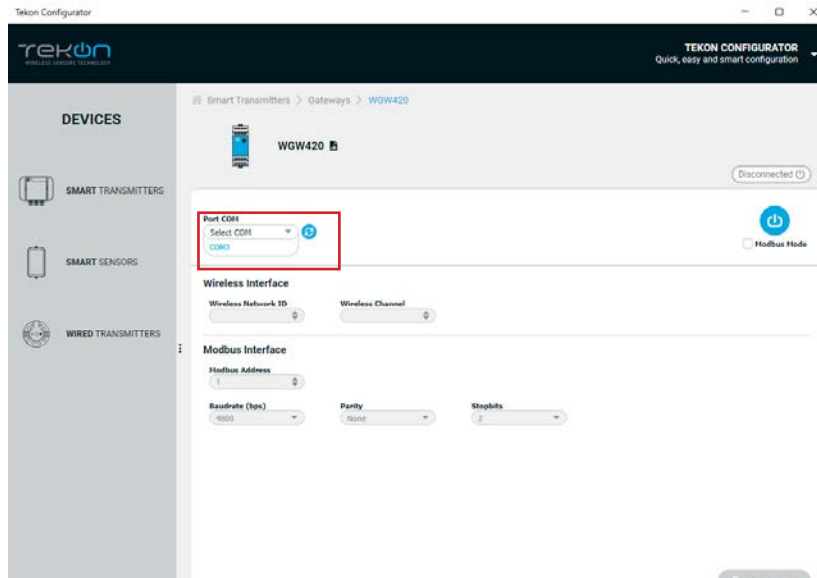

2nd option: Type the name of the device in the **"Search Device"** field on the home page and select.

07

Load the “Port COM” corresponding to the WG420 PLUS Wireless Gateway.

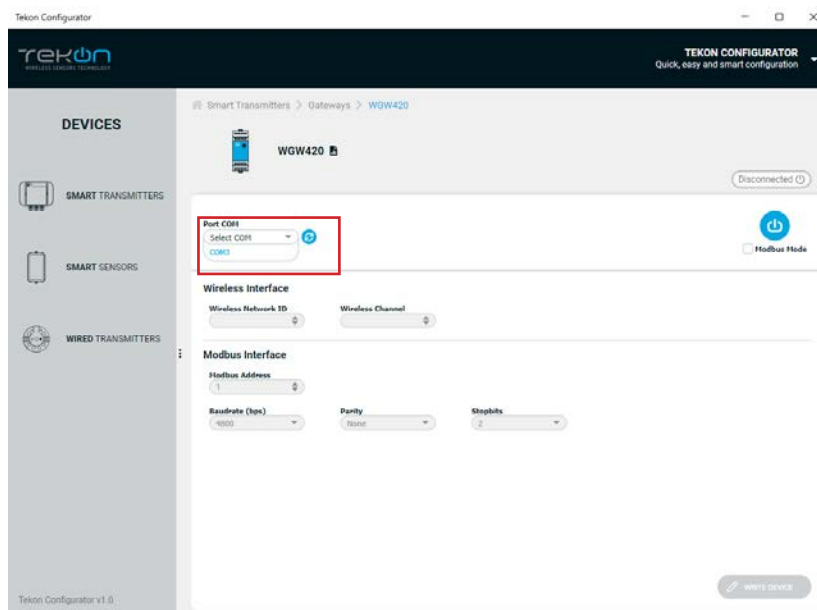

NOTE:

If the USB cable has already been connected before opening the device page, “Port COM” will appear in the list, otherwise you need to click on the “” button.

08

Select corresponding *Port COM*².

² You can check device’s serial port name in “Device Manager” on Microsoft® Windows® operating system.

step

01

WG420 PLUS WIRELESS GATEWAY CONFIGURATION

9

Perform a power cycle on the *Gateway*.

NOTE:

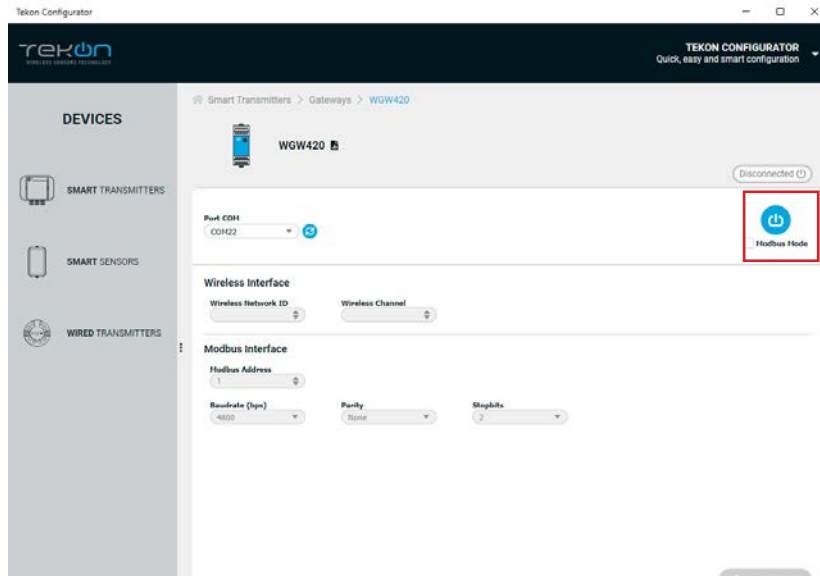

After power up, you have 10 seconds to enter configuration mode by clicking on Connect button [] (while green LEDs are permanently on).

In this mode, you can manage device parameters: *Modbus Address*, *Modbus Baudrate*, *Modbus Parity*, *Wireless Network ID* and *Wireless Channel*.

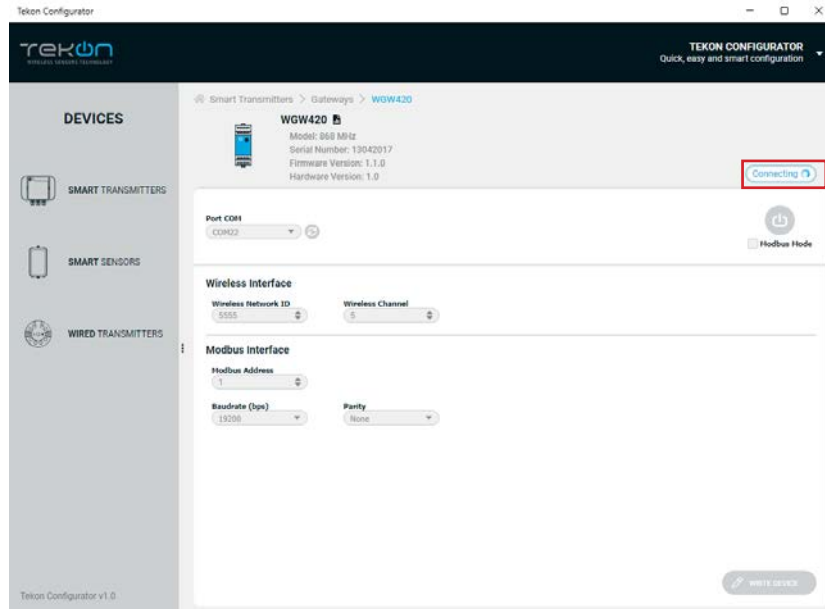

10

Click on *Connect* [] button.

11

The software will connect to the device.

NOTE:

If the software is unable to connect to the device, the **Connection Failed** status is displayed. If it hasn't connected, go back to the previous steps and check the port COM.

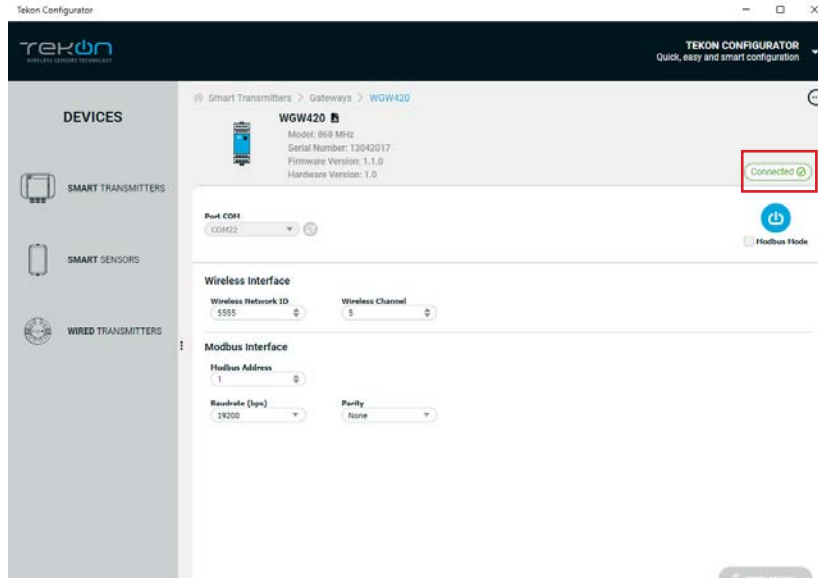

step

01

WG420 PLUS WIRELESS GATEWAY CONFIGURATION

12

When the software connects to the device, the “*Connected*” message will be displayed.

You can also verify configuration mode activation by checking LEDs on the gateway.

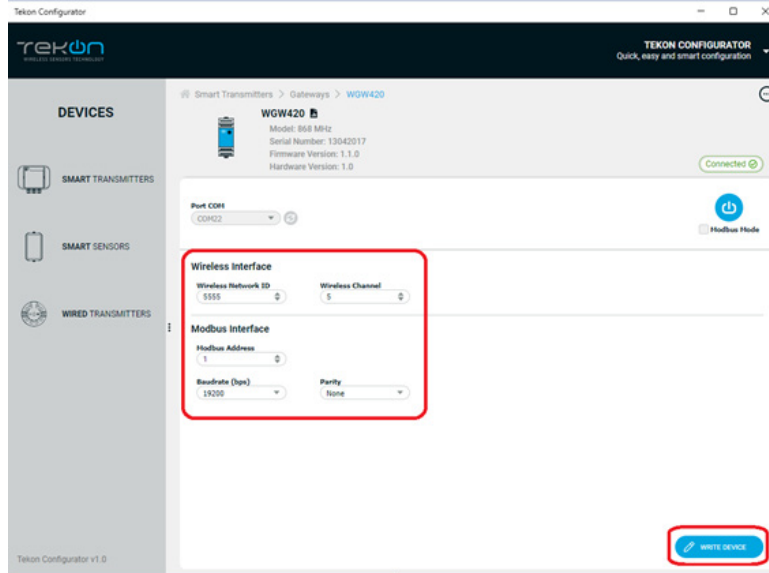

NOTE:

When the 10-second time frame to enter configuration mode is exceeded, the LEDs will turn permanently red and the gateway will enter normal operation mode.

To get back in configuration mode, you need to perform a power cycle - step 8.

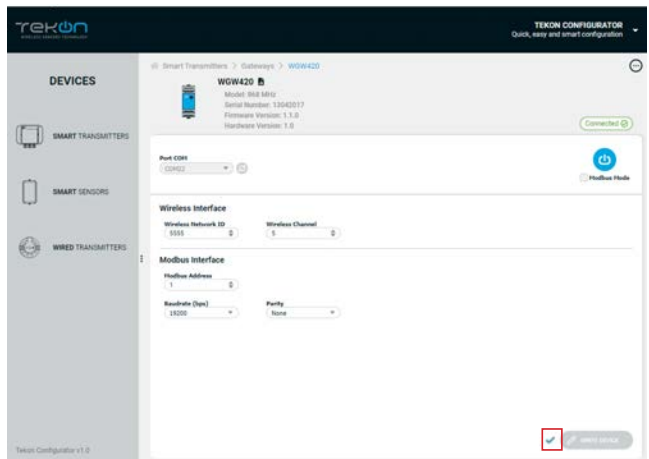

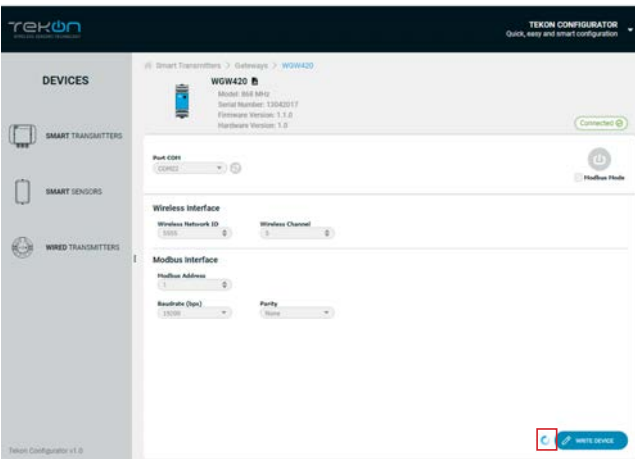

13

Configure the device fields and write by clicking on the **“WRITE DEVICE”** button.

NOTE: The **“WRITE DEVICE”** button will only be active when there is a change to one of the editable fields, if there is no change it will be disabled.

While the settings are being written, the following icon will be displayed next to the **“WRITE DEVICE”** button ()

NOTE: The wireless network connection between devices is ensured by setting the same *Wireless Network ID* and *Wireless Channel* parameters.

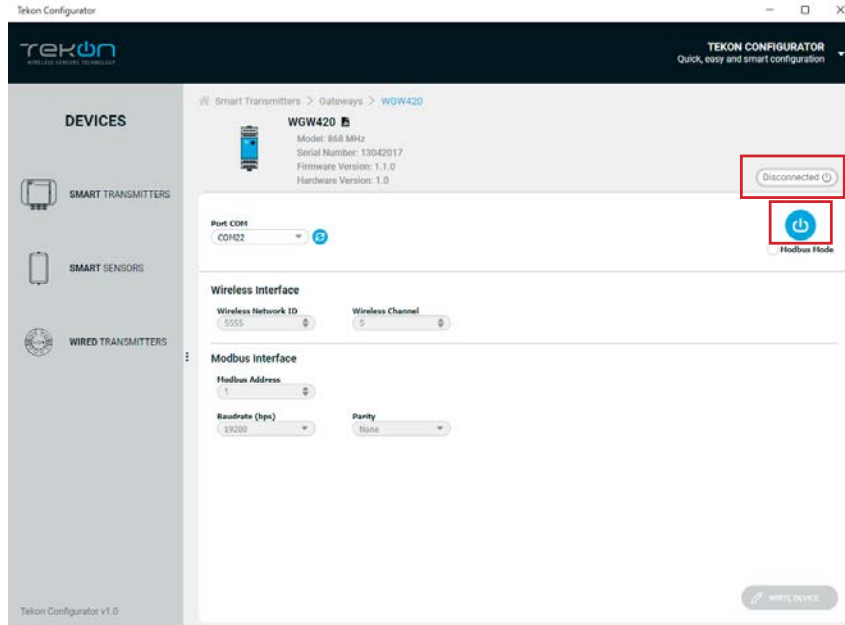

step

01

WGW420 PLUS WIRELESS GATEWAY CONFIGURATION

14

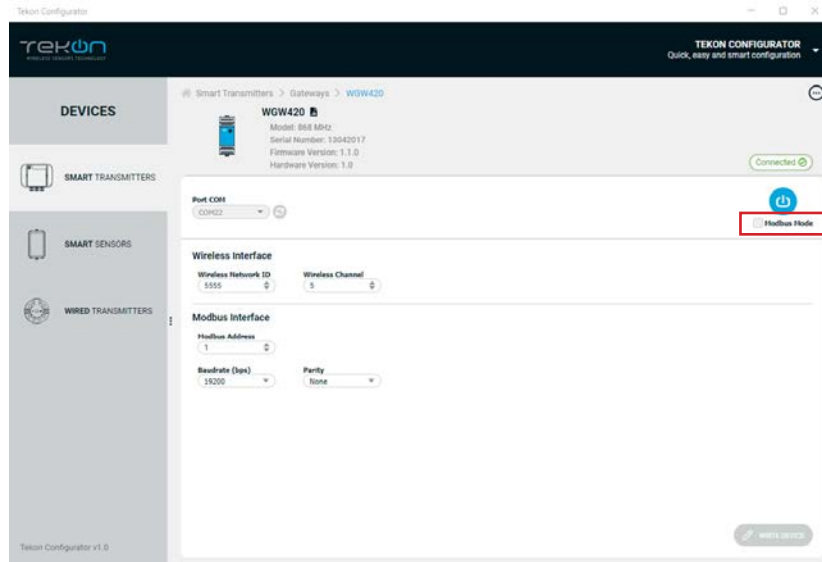

Click on the button () to exit *configuration mode* and return the device to normal operating mode.

15

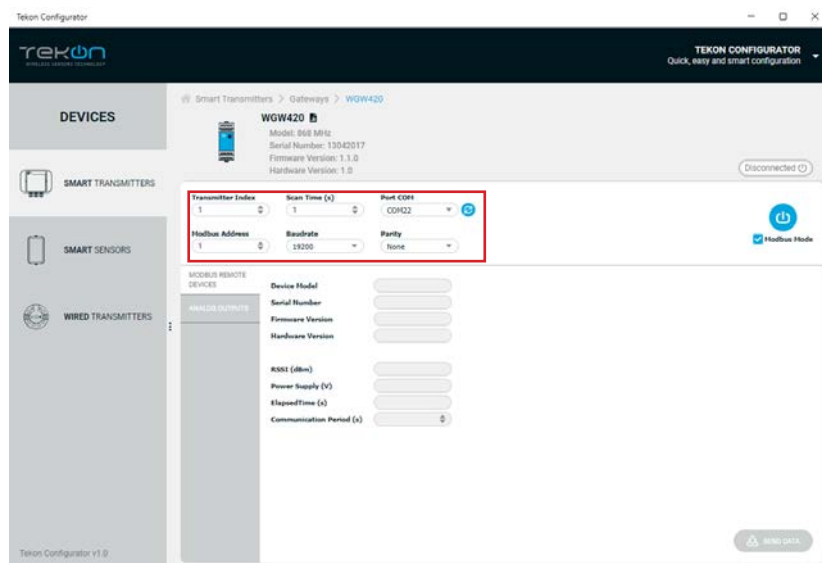

Modbus Communication

Select modbus mode in the checkbox below the Connect button.

16

Ensure that *Port name*, *Baudrate*, *Parity* and *Modbus Address* fields are the same as those obtained in configuration mode.

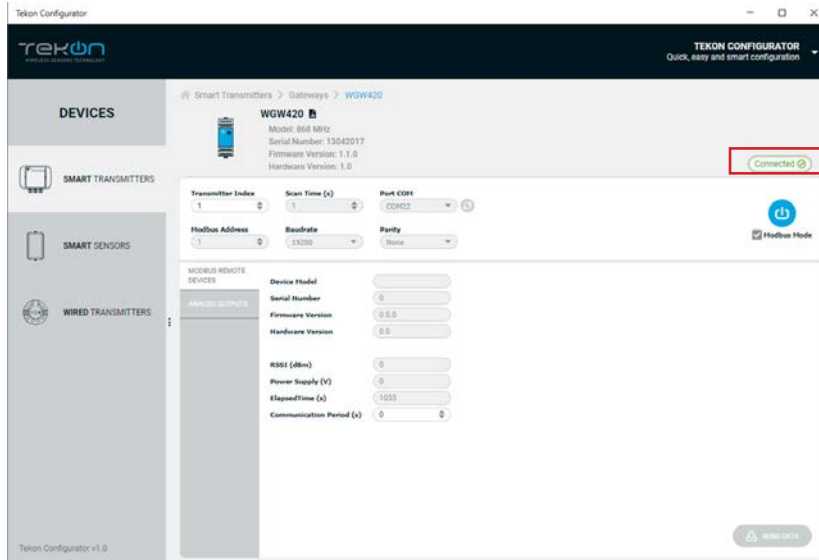

step

01

WG420 PLUS WIRELESS GATEWAY CONFIGURATION

17

Click on connect and check that the status is *“Connected”*.

NOTE:

See WG420 Datasheet to access LED indication information - page 4.

step
02

TWPH-1UT PLUS WIRELESS TEMPERATURE TRANSMITTER CONFIGURATION

step

02

TWPH-1UT PLUS WIRELESS TEMPERATURE TRANSMITTER CONFIGURATION

01

Connect the antenna and sensor connectors to the *TWPH-1UT PLUS Wireless Transmitter*.

02

Connect the micro USB cable to the computer and then to *TWPH-1UT PLUS Wireless Transmitter*.

03

Open *Tekon Configurator Software*

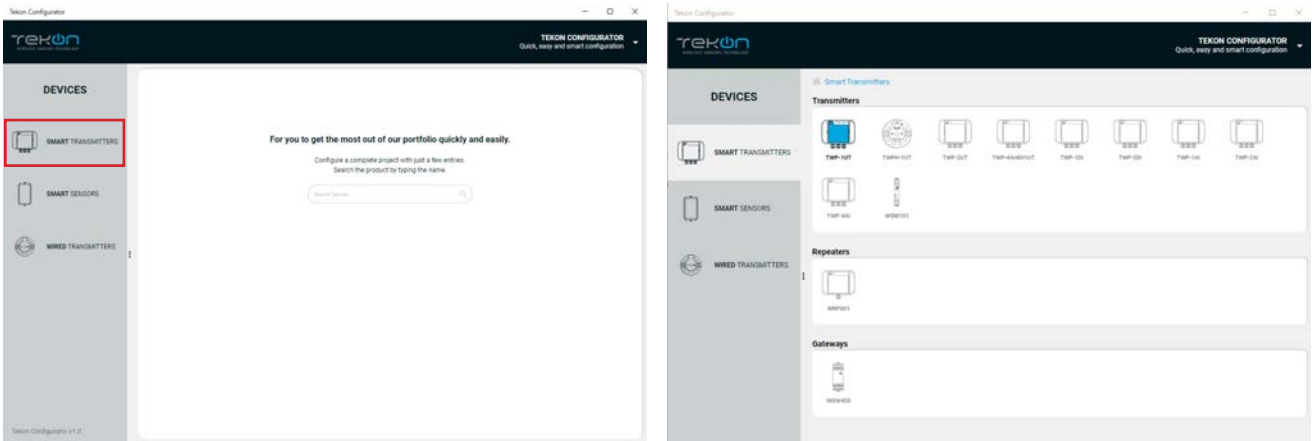

TWPH-1UT PLUS WIRELESS TEMPERATURE TRANSMITTER CONFIGURATION

04

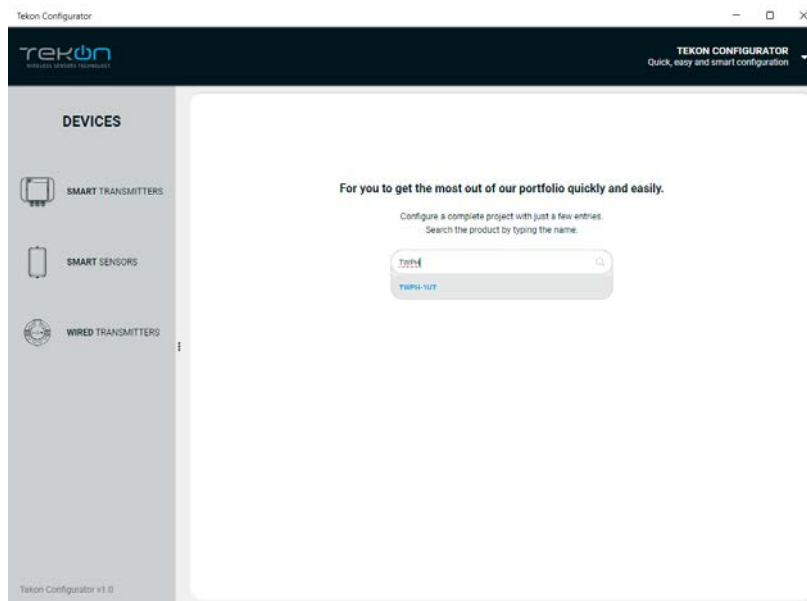

Open the TWPH-1UT PLUS Wireless Transmitter device page.

You can enter the device's page in the following ways:

1st option: Click on **"SMART TRANSMITTERS"** in the left menu and then click on the TWPH-1UT.

2nd option: Type the name of the device in the **"Search Device"** field on the home page and select.

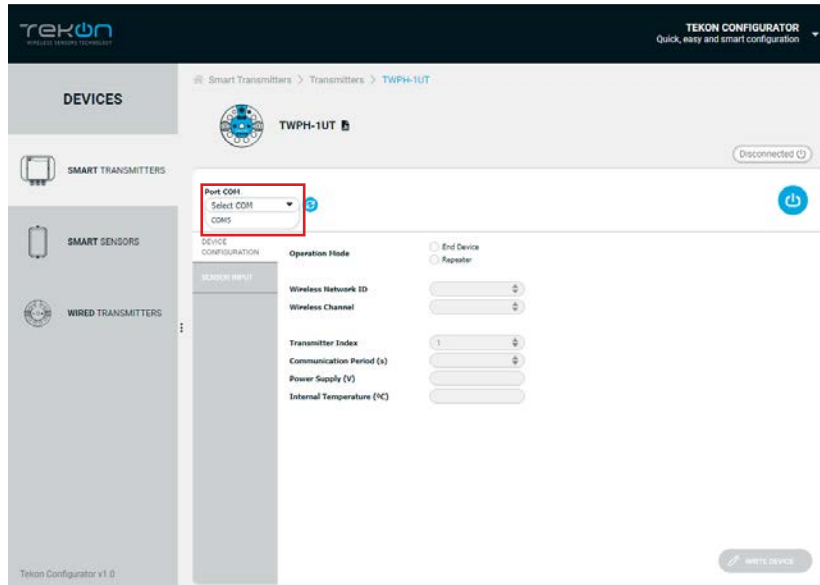

step

02

TWPH-1UT PLUS WIRELESS TEMPERATURE TRANSMITTER CONFIGURATION

05

Load the “Port COM” corresponding to the TWPH-1UT PLUS Wireless Transmitter.

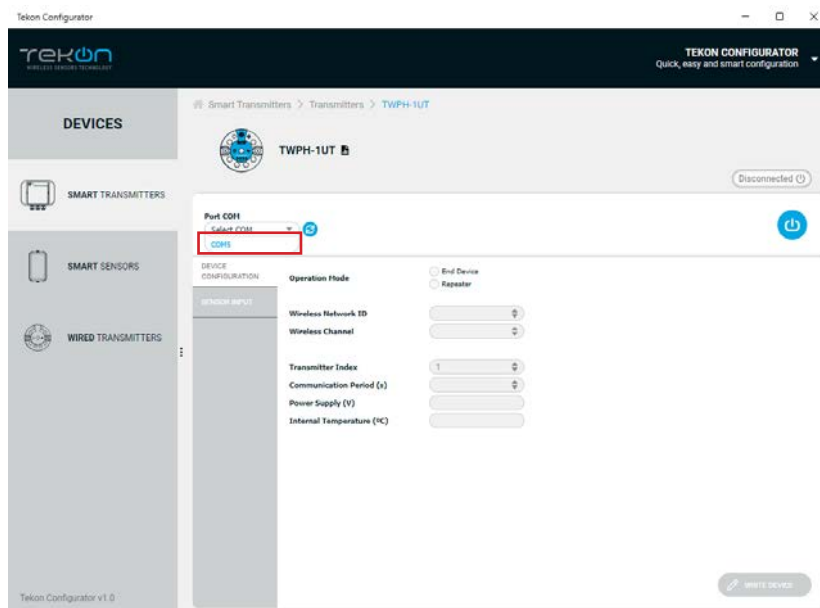

NOTE:

If the USB cable has already been connected before opening the device page, “Port COM” will appear in the list, otherwise click the button 

06

Select corresponding *Port Com*².

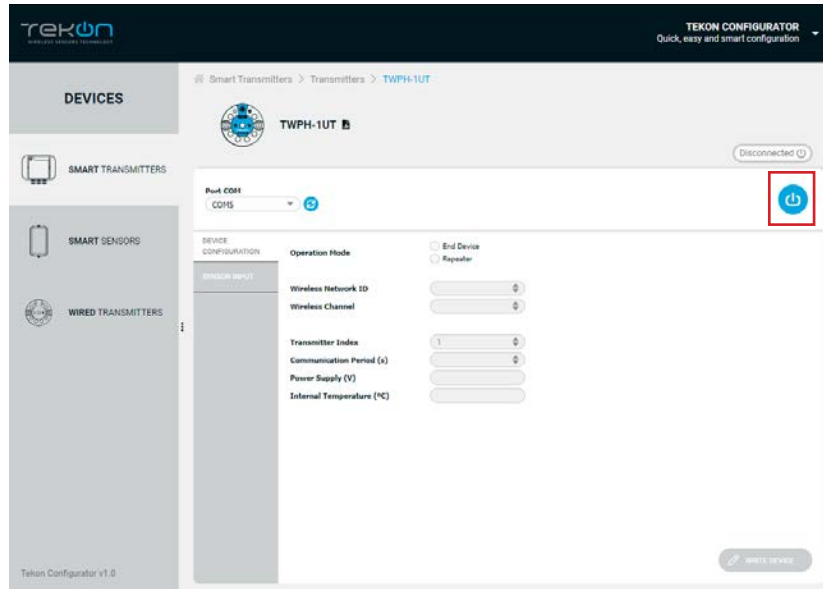

² You can check device’s serial port name in “Device Manager” on Microsoft® Windows® operating system.

TWPH-1UT PLUS WIRELESS TEMPERATURE TRANSMITTER CONFIGURATION

07

Click on the “Connect” button () to enter *Configuration Mode*.

When the *TWPH-1UT Transmitter* is in *Configuration Mode*, all LEDs are active but with different behaviours.

 LED permanently on

 LED flashing with 1 second interval

step
02

TWPH-1UT PLUS WIRELESS TEMPERATURE TRANSMITTER CONFIGURATION

08

The software will connect to the device.

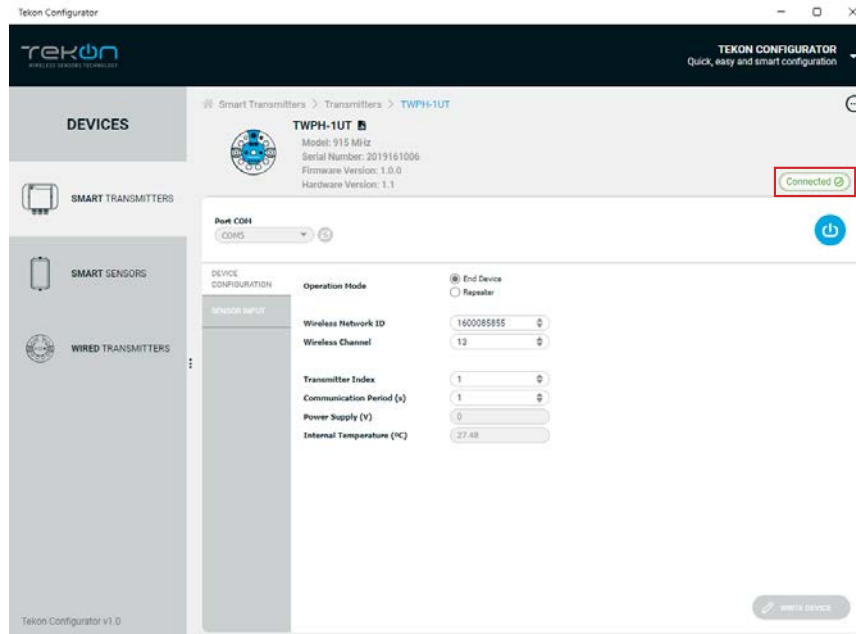

NOTE:

If the software is unable to connect to the device, the **Connection Failed** status is displayed. If it hasn't connected, go back to the previous steps and check the port COM.

09

When the software connects to the device, the “Connected” message will be displayed.

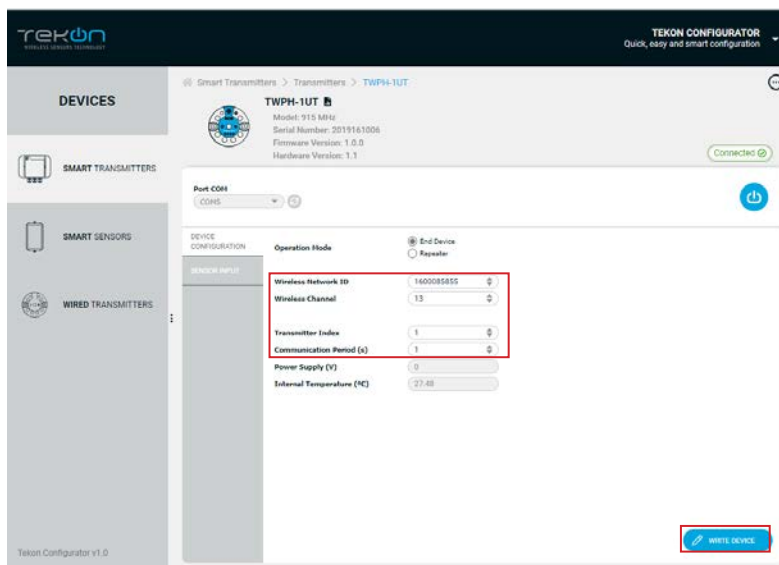

TWPH-1UT PLUS WIRELESS TEMPERATURE TRANSMITTER CONFIGURATION

10

Configure *Wireless Network ID* and *Wireless Channel* previously obtained from *Gateway*.

The wireless connection between both devices is ensured by setting the same *Wireless Network ID* and *Wireless Channel* parameters. Gateway Modbus Index will define the modbus registers window used to store information sent by the transmitter. Each transmitter should have a different *Gateway Modbus Index* in order to avoid information override.

Click on *Write Device* button to update *Transmitter* settings.

On this page you can configure the transmitter's *communication period*, i.e. the time interval between measurements and communication of the values to the gateway. In addition, you can configure the *reconnection period* which is only triggered when communication between the gateway and the transmitter fails. When communication fails, the transmitter will try to connect to the gateway using the following logic:

- 5 attempts with the communication period set;
- N attempts with the reconnection period until communication is successful.

The default reconnection period is 30 minutes. Please note that short reconnection periods (< 30 minutes) will impact the transmitter's autonomy if communication takes a long time to be re-established.

NOTE:

The "WRITE DEVICE" button will only be active when there is a change to one of the editable fields, if there is no change it will be deactivated.

While the settings are being written, the following icon will be displayed next to the "WRITE DEVICE" button (🔄)

If the changes to the device have been written, the following symbol will appear (✓)

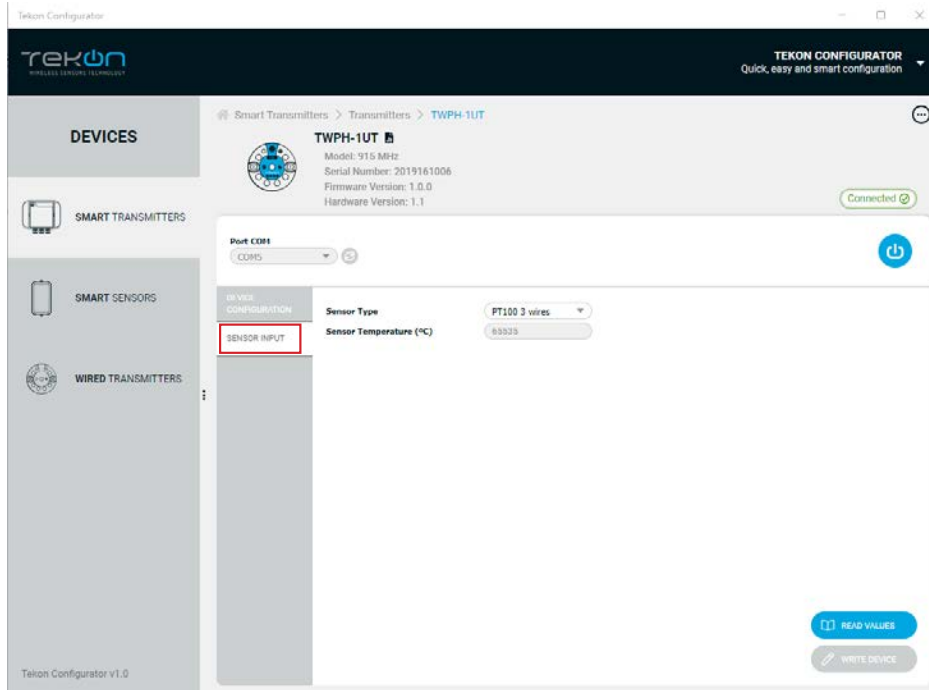

If not, the following symbol will appear (✗), try again and check that the device is connected correctly.

step
02

TWPH-1UT PLUS WIRELESS TEMPERATURE TRANSMITTER CONFIGURATION

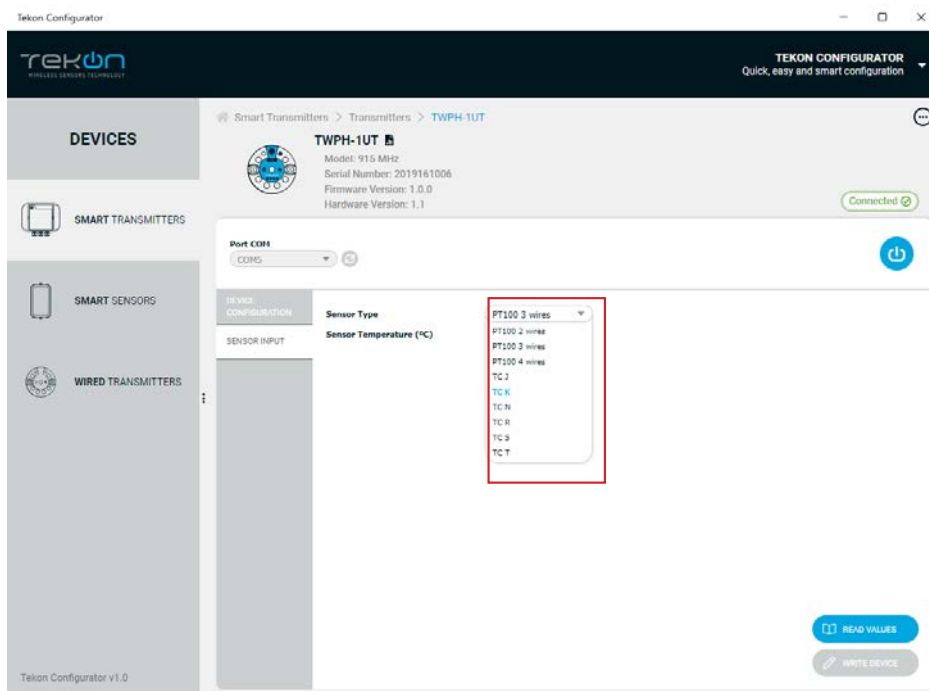

11

Click on **"SENSOR INPUT"**

12

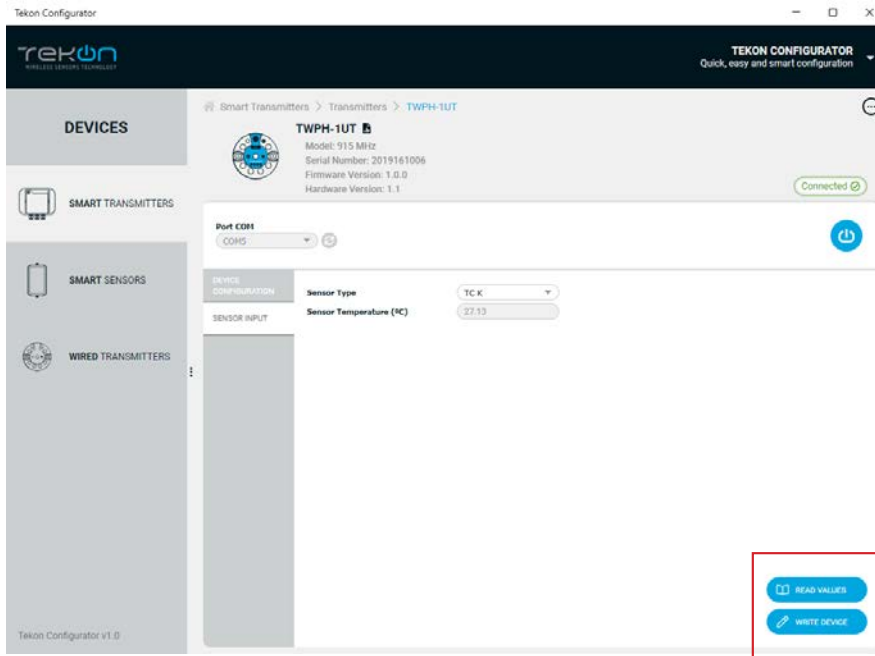

Select the **sensor type** you will use.

TWPH-1UT PLUS WIRELESS TEMPERATURE TRANSMITTER CONFIGURATION

13

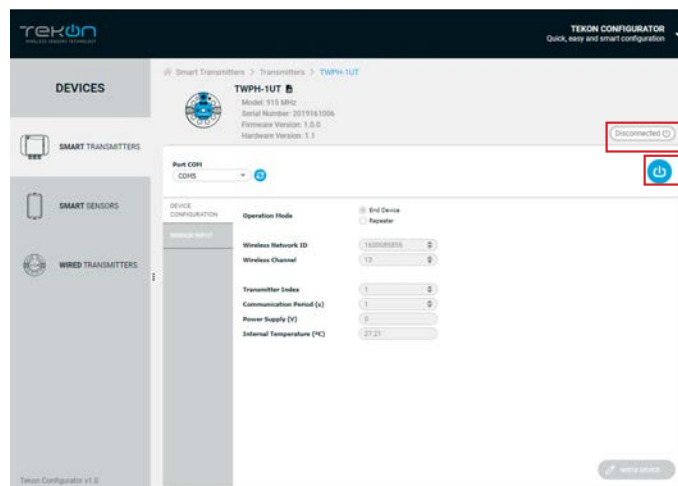

Click on *Write Device* button to update the *Transmitter* settings.
Click on *Read Values* button to read the sensor and internal temperature.

14

Click on the button (⏻) to exit *configuration mode* and return the device to normal operating mode.

After clicking on *Disconnect* button, the device will permanently attempt to connect to a wireless network. If there is no communication, the Status LED flashes slowly and the Mode LED flashes quickly. When there's a successful connection directly to a wireless network, both status LEDs alternate quickly - during 1 minute if the transmitter is operating as end device or permanently if operating as repeater.

NOTE:

Make sure that the devices are at a distance of at least 3 meters or remove the antenna from the gateway (in case both devices are near each other).

step
03

WGW420 GATEWAY ANALOG OUTPUTS CONFIGURATION

01 Follow steps 01 and 14 of the PLUS Wireless Gateway Configuration.

02 In *Tekon Configurator Software* select **MODBUS MODE** >> **ANALOG OUTPUTS**

The screenshot shows the Tekon Configurator v1.0 interface. On the left, there is a 'DEVICES' sidebar with categories: SMART TRANSMITTERS, SMART SENSORS, and WIRED TRANSMITTERS. The main area displays the configuration for a WGW420 gateway. At the top right, it says 'Disconnected'. Below this, there are fields for Transmitter Index (1), Scan Time (s) (1), and Port COM (COM2). Further down, there are fields for Modbus Address (1), Baudrate (4800), Parity (None), and Stopbits (2). A 'Modbus Mode' checkbox is checked and highlighted with a red box. Below this, the 'ANALOG OUTPUTS' section is highlighted with a red box, showing fields for Output Index (1), Minimum Value, Maximum Value, Number of Cycles, Output Offset (µA), Modbus Address Link, and Actual Current (mA). A 'SEND DATA' button is at the bottom right.

03 Click the (🔌) button and wait for the device to connect.

This screenshot shows the same Tekon Configurator v1.0 interface as the previous one, but the gateway is now 'Connected'. The status at the top right has changed from 'Disconnected' to 'Connected', which is highlighted with a red box. The power button (🔌) is also highlighted with a red box. The configuration fields for the gateway are now populated with specific values: Model: 868 MHz, Serial Number: 13042017, Firmware Version: 1.1.0, Hardware Version: 1.0. The 'Modbus Mode' checkbox remains checked. The 'ANALOG OUTPUTS' section shows updated values: Output Index (1), Minimum Value (6), Maximum Value (55), Number of Cycles (5), Output Offset (µA) (5), Modbus Address Link (5), and Actual Current (mA) (3.1). The 'SEND DATA' button is still present at the bottom right.

step
03 | GATEWAY ANALOG OUTPUTS

04

Considering the transmitter configuration with Modbus Address=1, there is a Gateway Modbus Address Window corresponding to Modbus address window [0-19].

HOLDING REGISTERS - TRANSMITTERS DATA		MB Add
Description	Address	
Serial Number	[Transmitter Modbus Index-1] x 20+0	0
Transmitter Model	[Transmitter Modbus Index-1]x20+2	
RSSI	[Transmitter Modbus Index-1]x20+3	
Communication Period	[Transmitter Modbus Index-1]x20+4	
Elapsed Time	[Transmitter Modbus Index-1]x20+5	
Power Voltage	[Transmitter Modbus Index-1]x20+6	
Data 0	[Transmitter Modbus Index-1]x20+7	
Data 1	[Transmitter Modbus Index-1]x20+9	9
Data 2	[Transmitter Modbus Index-1]x20+11	
Data 3	[Transmitter Modbus Index-1]x20+13	
Data 4	[Transmitter Modbus Index-1]x20+15	
FW Version Major Minor	[Transmitter Modbus Index-1]x20+17	
FW Version Revision	[Transmitter Modbus Index-1]x20+18	
HW Version Major Minor	[Transmitter Modbus Index-1]x20+19	19

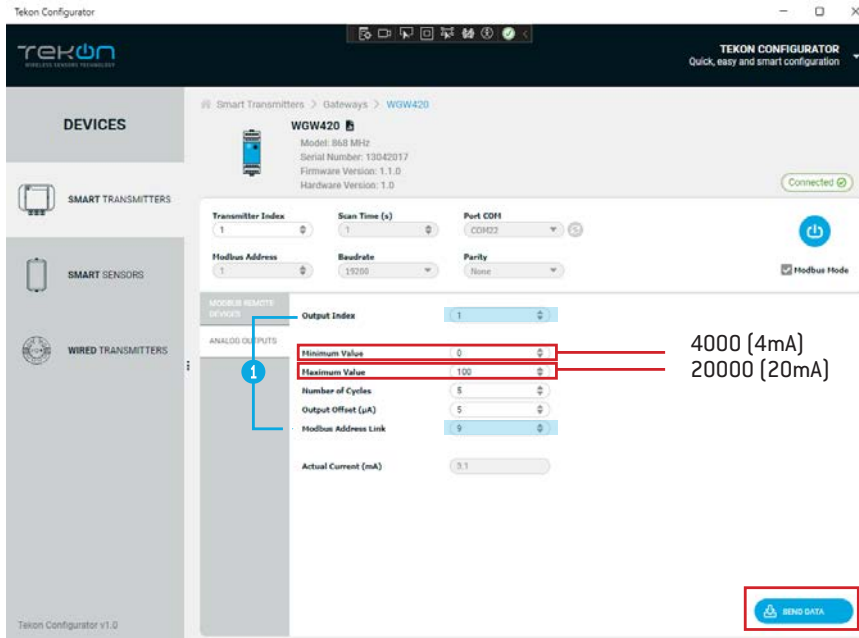

NOTE:

Transmitter analog input 1 data is received and stored at the Gateway Modbus address [9].

05

Link the “*Output Index*” (Gateway) to Temperature Input 1 (Transmitter) and configure the “*Modbus Address Link*” according to the previous step. Set the minimum and maximum values and click on “*Send Data*”.

NOTE:

① Output index 1 is linked to modbus address [9], according to mapping table of step 03.

Modbus address double word [float 32] value is converted into 4..20 mA scale according to minimum and maximum defined values.

- 1** → Green led permanently on during a closed current loop
- 2** → Red led permanently on during an open current loop

step
04

WRP001 PLUS WIRELESS REPEATER CONFIGURATION

CONNECT AND CONFIGURE THE PLUS WIRELESS REPEATER

01 Loosen the 4 screws of the case and open it.

02 Connect a micro USB cable to the computer and then to *WRP001 PLUS Wireless Repeater*.

03 Open the *WRP001 PLUS Wireless Repeater* device page. You can enter the device's page in the following ways:

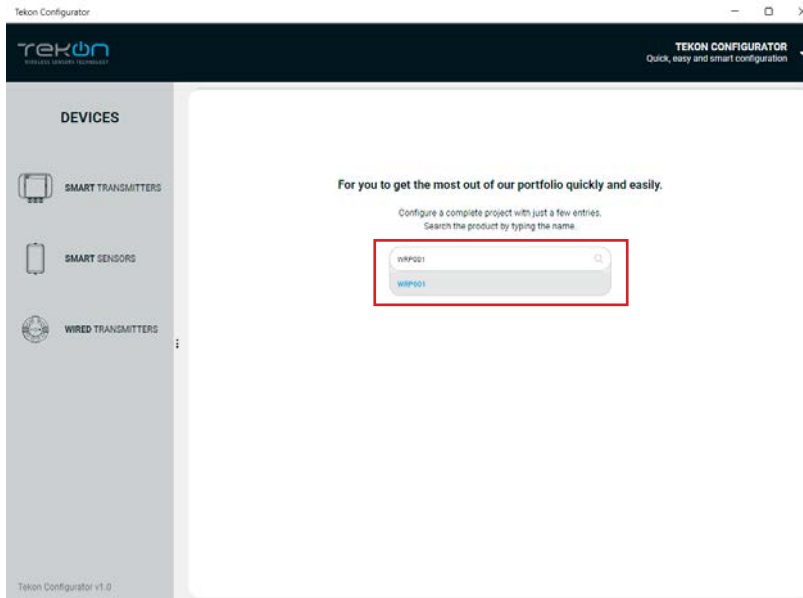

1st option: Click on *"SMART TRANSMITTERS"* in the left menu and then click on the device.

step

04

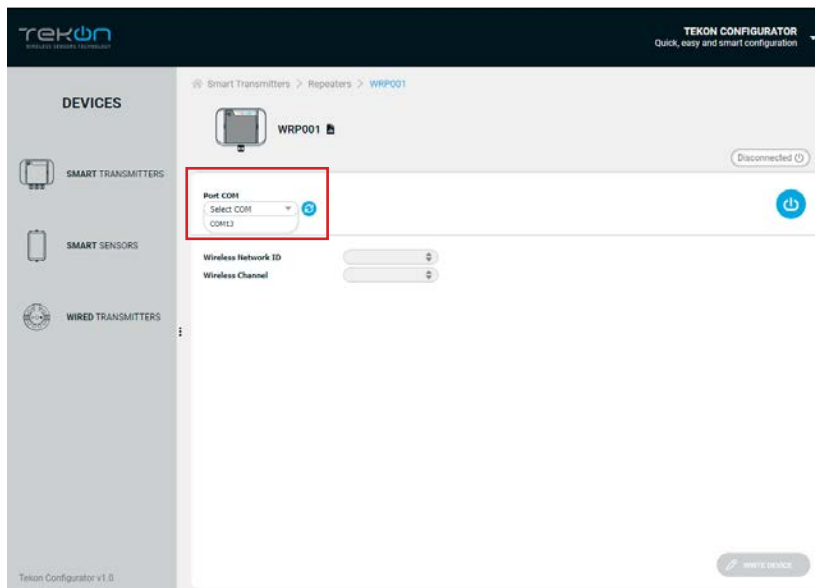

CONNECT AND CONFIGURE THE PLUS WIRELESS REPEATER

2nd option: Type the name of the device in the “*Search Device*” field on the home page and select.

04

Load the “Port COM” corresponding to the WRP001 PLUS Wireless Repeater.

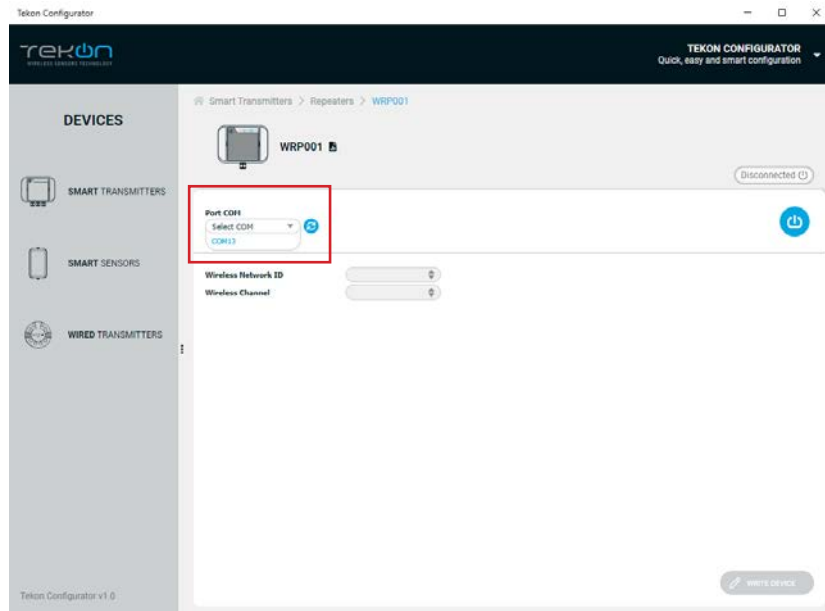

NOTE:

If the USB cable has already been connected before opening the device page, “Port COM” will appear in the list, otherwise you need to click on the “🔄” button.

05

Select corresponding *Port name*².

² You can check device's serial port name in "Device Manager" on Microsoft® Windows® operating system.

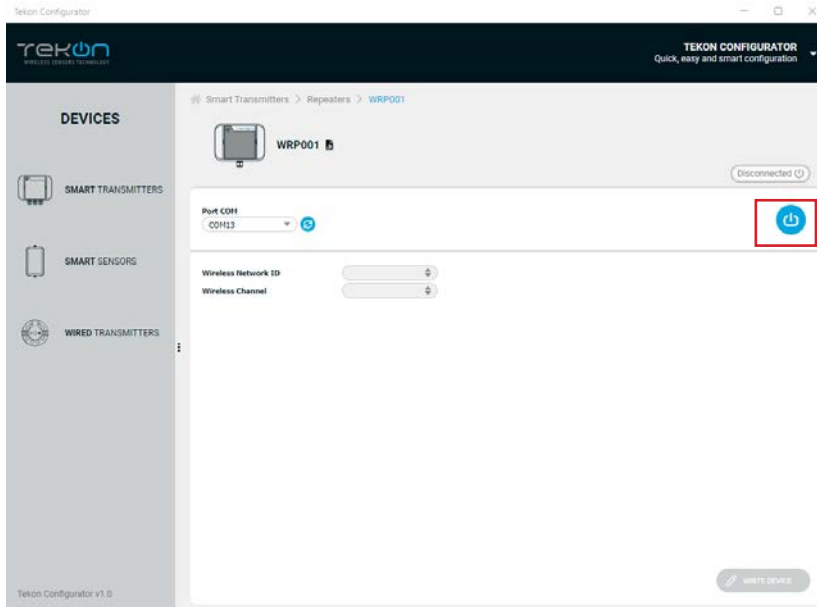

step

04

CONNECT AND CONFIGURE THE PLUS WIRELESS REPEATER

06

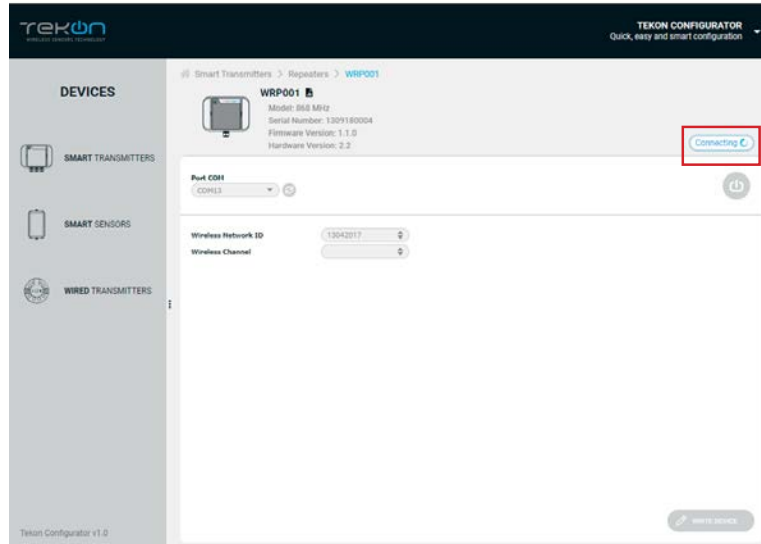

Click on *Connect* () button.

CONNECT AND CONFIGURE THE PLUS WIRELESS REPEATER

07

The software will connect to the device.

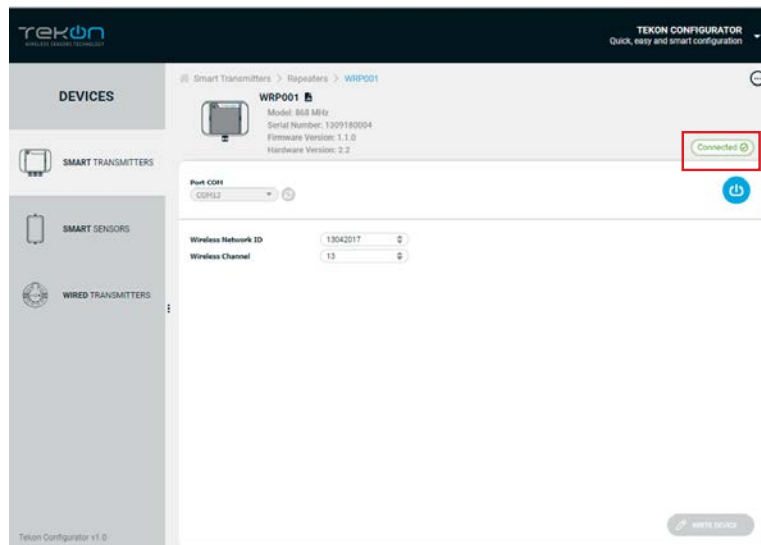

NOTE:

If the software is unable to connect to the device, the **Unexpected Error** status is displayed. If it hasn't connected, go back to the previous steps and check the port COM.

08

When the software connects to the device, the "Connected" message will be displayed.

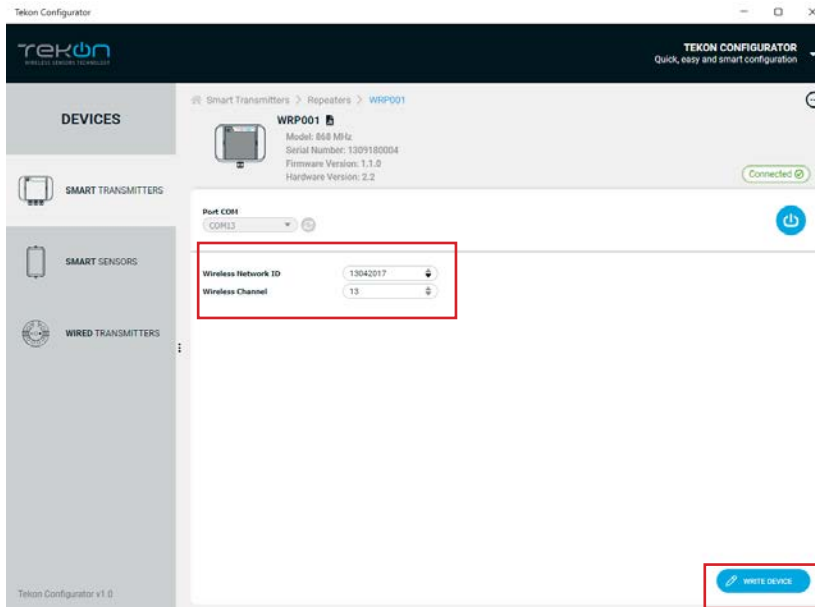

step

04

CONNECT AND CONFIGURE THE PLUS WIRELESS REPEATER

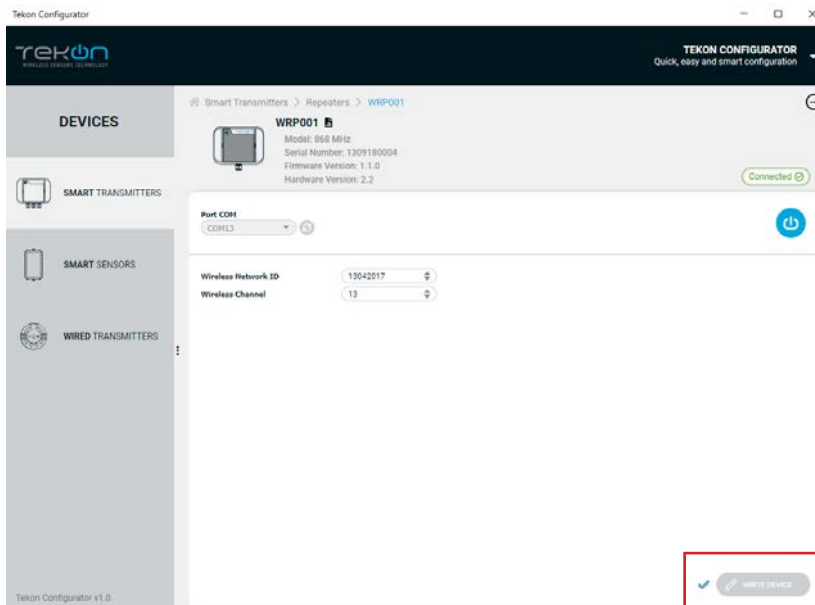

09

Configure the “*Wireless Network ID*” and “*Wireless Channel*” previously obtained from the Gateway. Click on the “*WRITE DEVICE*” button to update the transmitter settings.

10

Wait for the software to write the new setting to the device. Wait for the  status to change to .

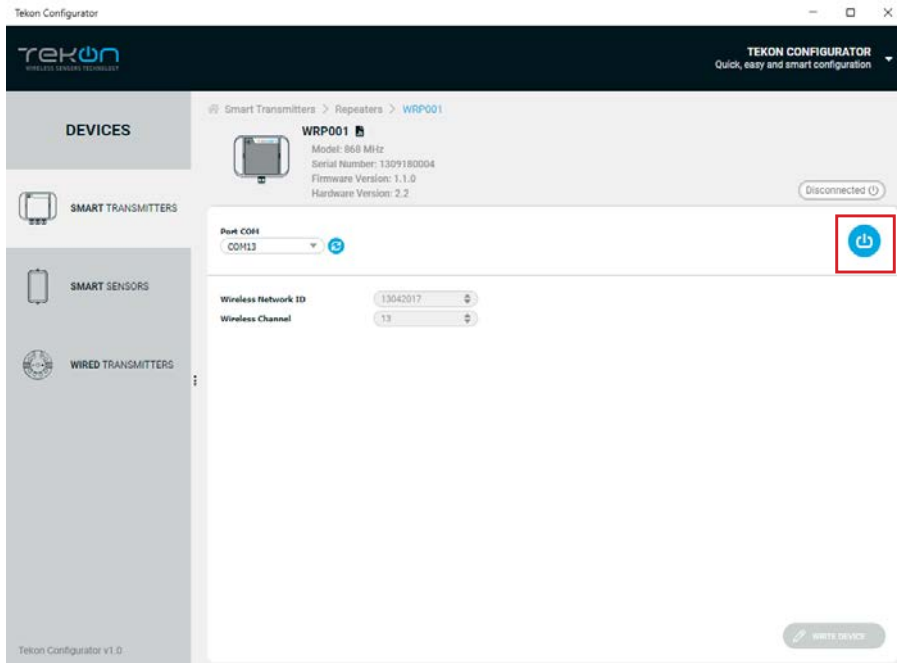

If not, the symbol () will appear: try again and check that the device is connected correctly.

CONNECT AND CONFIGURE THE PLUS WIRELESS REPEATER | step 04

11

Click  to exit the configuration and return to normal operating mode.

step
05
SITE SURVEY MODE

Refers to following devices: *TWP4AI Transmitter*, *TWP-4AI4DI1UT Transmitter*, *WRP001 Repeater* and *TWPH-1UT Transmitter*.

Site survey mode is a tool that allows a quick wireless signal strength evaluation at the site of installation. It doesn't require additional equipment or software.

01

Press and hold Mode (⏻) button until Status LEDs are permanently on and Mode LEDs flash.

RSSI LEDs indicate the signal strength.

02

Press and hold Mode (⏻) button until RSSI LEDs switch off and device resumes normal operation mode.

step
05 | SITE SURVEY MODE

03

Press and hold operations button for 3 seconds. Red and green LEDs will stay on.

Blue LEDs indicate the signal strength.

04

Press and hold operations button for 3 seconds to exit Site Survey Mode and activate normal operation mode.
